
Manuscript Withdrawal Policy

Authors occasionally may find it necessary to withdraw a submitted manuscript from consideration for publication. MedPulse Spectrum understands and accommodates such situations. The following guidelines outline the process and conditions for manuscript withdrawal:

1. **Request for Withdrawal:** Authors must formally request the withdrawal of their manuscript by contacting the editorial office via email. The request should come from the corresponding author and include the reasons for withdrawal.
2. **Approval and Confirmation:** The withdrawal request undergoes an internal review by the editorial team. Once approved, authors receive formal confirmation of the withdrawal along with a statement acknowledging the withdrawal reason.
3. **Post-Review Withdrawal:** If a manuscript is withdrawn after undergoing the peer-review process, the decision to publish or reject is made based on the review outcomes until the withdrawal request was initiated. The withdrawal does not erase any previous reviewer comments or assessments.
4. **Withdrawal Fees:** Manuscript withdrawal does not incur any fees. Authors are not charged for withdrawing their submission.
5. **Publication Status:** Withdrawn manuscripts will not be published by MedPulse Spectrum. Any information related to the withdrawn manuscript will be removed from public access.
6. **Resubmission Option:** Authors have the option to revise and resubmit the withdrawn manuscript if they wish to reconsider it for publication. The resubmission will undergo the standard submission and peer-review process.
7. **Ethical Considerations:** Manuscript withdrawal is handled with utmost confidentiality and in compliance with ethical standards. The reasons for withdrawal will not be disclosed without the authors' explicit consent.

Authors are encouraged to carefully consider the decision to withdraw a manuscript, and requests for withdrawal should be made with a clear understanding of the implications. The withdrawal process aims to be transparent, ethical, and accommodating to authors' needs while ensuring the integrity of the publication process.
