### Article Retraction Policy

---

MedPulse Spectrum adheres to a stringent article retraction policy to ensure the integrity and credibility of published content. Retraction may be considered in exceptional circumstances where serious ethical concerns, errors, or inaccuracies are identified in a published article. The following guidelines outline the procedures and considerations for article retraction:

1. **Initiation of Retraction:** Retraction may be initiated by the authors themselves or brought to the attention of the editorial team through readers, reviewers, or other stakeholders.
2. **Editorial Review:** The editorial team conducts a thorough review of the concerns raised, collaborating with the authors to gather additional information or clarification.
3. **Retraction Decision:** If, after careful review, it is determined that retraction is warranted, the editorial team, in consultation with relevant experts, makes the decision to retract the article.
4. **Notification:** The retraction decision is promptly communicated to the authors, readers, and relevant institutions, along with a clear and transparent explanation of the reasons for retraction.
5. **Public Statement:** A formal retraction statement is published in a subsequent issue of MedPulse Spectrum, clearly indicating the retracted article's bibliographic information and reasons for retraction.
6. **Corrections and Apologies:** In cases where errors or inaccuracies are identified that do not warrant full retraction, the editorial team may issue corrections or clarifications. If necessary, apologies may be extended.
7. **Database Notation:** The retracted article is marked in relevant databases, indexing services, and the journal's website to alert readers and prevent the dissemination of inaccurate information.
8. **Authors' Responsibilities:** Authors are expected to cooperate fully with the retraction process, providing necessary documentation and cooperating in correcting the scholarly record.
9. **Appeals:** Authors have the right to appeal the retraction decision. Appeals are reviewed by the editorial team, and external expert opinions may be sought.
10. **Ethical Considerations:** The retraction process is conducted with the utmost transparency and adherence to ethical standards. The reasons for retraction are communicated responsibly and without violating confidentiality agreements.

MedPulse Spectrum is committed to maintaining the highest ethical standards in scholarly publishing. Article retraction is a serious and carefully considered measure taken to preserve the integrity of scientific literature and uphold the trust of the academic community and the public.
